A COLLARIUM®

is more than a solarium!

3 in 1 effect with unbeatable benefits and all natural – that is a **Collarium®**.

DISCOVER THE ORIGINAL!

COLLAGEN LIGHT

stimulates the skin's own production of collagen. The complexion improves, lines and wrinkles are reduced.

OPTIONAL UV-LIGHT

for a radiant complexion and a gentle tan - according to your wishes.

VITAMIN D

for health, vitality and mobility.

... beauty does not only
come from the inside!

Stay young and healthy...

Can light do **THAT** ?

YES! Scientifically proven.

Collagen light is able to positively stimulate the body's collagen levels.

The main benefits:

Anti-aging-effects for your skin. The oxygen absorption and the regeneration of the skin are improved, the collagen network is strengthened and therefore already pronounced skin structures (lines and wrinkles) are remodelled.

Wound healing through a positive influence on the skin cells and regeneration of healthy skin.

Improvement of muscle-, skeleton- and joint health through the stimulation by collagen and influence on the joint cartilage.

Among others, these **anti-aging effects** were confirmed by two observational studies (hospital Piano, Switzerland and Dr. Ferenc Gódor, dermatologist, Hungary) as well as by Professor Sommer, University Ulm (Germany).

100% of the users noticed a significant amelioration of wrinkles and lines in face and décolleté.

100% of the users observed a significant improvement of the entire skin consistency and elasticity.

97% of the users reached their individual goals of the treatment.

88% of the users observed a significant improvement of distinctive wrinkles and lines in face and décolleté.

* Source: Observational study of 51 test persons, hospital Piano, Switzerland

Stay young with *Collagen!*

Collagen is the most abundant protein in the body.

Collagen is an important part of our connective tissue, which is also called the “network” of the body.

Collagen consists of form-giving and elasticity providing fibres that have a significant impact on the strength or otherwise on the weakness of our connective tissue.

Anti-aging!

Over the years, our skin loses elasticity and often tends to produce dry, scaly spots or other types of blemishes, which make the complexion look pale and minor wrinkles appear more distinct. Thanks to the unique combination of the soothing power of light and the specially designed collagen plus tubes, the Collarium® gives sensitive skin back what it has lost over the years – simply twice as good, also for sensitive skin.

Skin detoxification is stimulated

Skin irritation is reduced

Lines, scars and wrinkles are reduced

Moisture absorption of the skin and its storage capacity improve

Positive results in cases of skin diseases, e. g. neurodermatitis, acne, psoriasis and pigment disorders

Before

After

Individual result

Muscle tightening and performance increase after the workout

Reduction and preventing the risk of injuries

Support of the body's own metabolic processes and stimulation of the blood circulation

Anti-inflammatory effects

Acceleration of regeneration

Positive results with painful joints

Strengthening of the collagen network (tendons, ligaments, articular cartilage)

Athletic success thanks to collagen!

The tensile strength of sinews and tendons, the flexibility of bones or the pressure resistance of articular cartilage are largely determined by the collagen in our tissue. During the application with collagen light the muscles, tendons and joints are strengthened, the risk of injury is reduced, the training success is enhanced and the regeneration after a workout is faster.

That is why the saying goes: Tan. Take preventive steps. Maintain health. Increase performance.

Immune system:

... protects against infections, inflammations and lowers the risk of autoimmune diseases such as ulcerative colitis, Crohn's disease or rheumatism.

Brain:

... ensures a sunny mood, prevents schizophrenia, lowers the risk of multiple sclerosis, dementia and Alzheimer's disease.

Cardiovascular system:

... regulates blood pressure, lowers the risk of heart attack, stroke and vascular diseases.

Liver:

... pro-vitamin D3 is taken to the liver where it is transformed into vitamin D3, which is activated by the kidneys.

Cancer:

... reduces the risk of cancer (e.g. breast cancer), suppresses cancer cell growth and encourages the self-destruction mechanism in cancer cells.

Bones:

...strengthens bones, prevents rickets and osteomalacia and lowers the risk of fractures.

Muscles:

... increases muscle power and decreases the risk of falls and femoral neck fractures in old age.

Pancreas:

... has a positive effect on insulin production, smoothes blood sugar as well as blood lipids and lowers the risk of diabetes.

Bio-positive aspects of UV light

VITAMIN D
FOR YOUR HEALTH

Why not benefit from the "healing power of the sun" in the form of UVB light on the Collarium® as well? During the alternative UV tanning session the body produces the sun vitamin D3, which is essential for life.

A sufficient level of vitamin D has a supportive effect on the entire immune system and thus helps to prevent many diseases. For example, it lowers the risk of breast and prostate cancer, the risk of heart attacks, strokes and vascular diseases and it helps to overcome insomnia and inner unrest.

Vitamin D regulates the calcium level and strengthens the bones. In addition, this hormone has a positive influence on the muscular performance and the entire physical fitness, which is not only proven with athletes.

A beautiful tan included!

Why *tanning* is *smart*.

A beautiful tan included!

1 Nature's Design:
Humans evolved outdoors under the sun. Indoor lifestyles today have deprived most of us of what nature intended: Regular UV exposure.

2 Sunburn Prevention:
A tan is your natural protection against sunburn and increases the effectiveness of sunscreen - one reason tanners sunburn less often than non-tanners.

3 Natural Vitamin D:
UV exposure to your skin is the natural way to make vitamin D. Studies show tanners have significantly higher vitamin D levels than non-tanners.

How your skin tans:

Ultraviolet light from sun or solarium/ Collarium® initiate tanning in your skin's outer layer.

Diagram of the Epidermis:

Skin cells are constantly produced and replaced, migrating up to the skin's surface, where they slough off in 30-day-cycles. That's why tans eventually fade.

UVA: Long-wave light that oxidizes (browns) the melanin, creating a natural tan.

UVB: Short-wave light that triggers melanocytes to produce the pigment called melanin.

Vitamin D: UVB makes vitamin D naturally. In a single tanning session, your skin cells can produce more of "the sunshine vitamin" than you get in 100 glasses of fortified milk.

Melanocytes: Special skin cells that produce and then emit the pigment melanin into surrounding skin cells.

Horny Layer: The outer layer of dead skin cells form a protective layer for the skin. UV exposure thickens the horny layer, providing additional protection.

Melanin: The pinkish pigment that browns and blows up like popcorn as it absorbs UVA light. Darkened melanin surrounds each skin cell, protecting it.

Testimonials,...

25 - 35 Years

After fitness training the collagen light therapy is ideal for my muscles and ligaments. Sore muscles? Not for me anymore!

The skin on my entire body feels much firmer and softer! My husband says the same thing!

The first wrinkles around the eyes and on the forehead were already there – thanks to collagen-light therapy they're already gone!

35 - 45 Years

My face is simply fresher and more radiant, many acquaintances ask me about it.

I realise how good the Collarium® is, especially when it comes to job-related stress: Care for body and soul.

My skin feels much softer and tighter over the entire body. I feel rejuvenated!

45 and older

The laughing folds on my face are clearly not as deep. Overall, my face looks much younger.

My skin holds moisture and is also much more receptive to body care products. Dry spots on the elbows and shins are passé!

I'm not ready to slow down yet – and the Collarium® strengthens my flexibility and keeps me fit!

... which ***tell the whole story!***
